Sapia.ai AI Agent Team — Build Complete ■

What Was Built

Everything is now in your Claude Sale Agent folder — **33 files** across a complete, production-ready agent system.

Outbound Process Flowchart

Step	Agent / System	Timing	Description
1. Sourcing	HubSpot / Sales Nav / Lusha	Fortnightly	Newsletter engagers and job movers are pulled for regional territories.
2. Planning	Sales Director / Research Analyst	Mon Morning	Signal harvest, lookalike scans, and target lists planning (cap: 100).
3. Scoring	ICP Scorer	Mon Afternoon	Qualifies target accounts (Tier A/B) against the custom scoring rubric.
4. Briefing	Company Researcher	Wednesday	Generates deep briefs (4 pain layers, competitors) for Thursday's batch.
5. Drafting	Copywriter	Tue/Thu 7:30 AM	Calibrates voice using Gong calls, drafts batch in subsets of 25 (max 100/session).
6. Slack Approval Gate	Sales Director / Rep	Tue/Thu 8:00 AM	Pushes digest to Slack. Rep reviews & approves/edits in Slack thread by 9 AM.
7. Enrichment	Prospect Hunter	Tue/Thu 9:30 AM	Enriches approved contacts via Lusha (email-only) and checks 90-day cooldown.
8. Execution	Sales Director / SalesLoft	Tue/Thu 10:00 AM	Registers Slack approvals and triggers SalesLoft send sequence.
9. Response Loop	Reply Handler	Daily / Ongoing	Monitors replies, runs BANT qualification, drafts replies, pushes briefs for bookings.

Files Delivered

8 Agent System Prompts → agent_prompts/

Each file is ready to paste directly into a Claude Project's **Custom Instructions** field:

File	Claude Project Name
00_sales_director.md	SAPIA-SD – Sales Director
01_research_analyst.md	SAPIA-RA – Research Analyst
02_icp_scorer.md	SAPIA-ICP – ICP Scorer
03_copywriter.md	SAPIA-CW – Copywriter
04_prospect_hunter.md	SAPIA-PH – Prospect Hunter
05_reply_handler.md	SAPIA-RH – Reply Handler
06_company_researcher.md	SAPIA-CR – Company Researcher
07_gtm_action_thinker.md	SAPIA-GAT – GTM Action Thinker

Knowledge Vault → [Sapia-Sales-Vault/](#)

Folder	Contents
00-ICP/	ICP Master Profile, Scoring Rubric (6-dimension, weighted), Persona Maps (CHRO, Head of TA, COO, CPO)
01-Product/	Product Overview, Competitive Differentiators, ROI Data Points
02-Case_Studies/	Case Study Template (ready to duplicate per customer)
03-Outreach/	3 email sequences, Subject Line Library, Objection Library (7 objections), Email Winners files
04-Brand_Voice/	Brand Guidelines (tone, prohibited phrases, approved language), Voice Profile Template
05-Signals/	Job Movers Log, Newsletter Engagers Log, Trigger Events Log
06-Performance/	Email Performance Tracker, Campaign Learnings, A/B Test Log

Config & Guides

File	Purpose
claude_desktop_config_template.json	MCP server config — fill in credentials, copy to ~/Library/Application Support/Claude/
README.md	Full team onboarding guide — share this with your peers

What You Need to Fill In

To ensure business-wide consistency, the central vault has already been fully pre-populated with your verified customer case studies, product overview, and approved ROI database.

Individual Account Executives (AEs) only need to configure their personal outreach settings and API access:

Do these before running your first agent session:

High Priority (Day 1)

1. **Cold_Winners.md** — AEs add 3–5 of their best-performing personal cold emails (remove prospect names).
2. **Voice Profiles** — Each of the 3 reps fills in their `Voice_Profile_Template.md` and saves it as `[FirstName]_Voice.md` inside `Sender_Voice_Profiles/`.
3. **claude_desktop_config_template.json** — Insert API credentials for the MCP servers and rename to `claude_desktop_config.json` in the Claude config folder.

Medium Priority (Week 1)

4. **Target_Account_List.csv** — Create this file in the `00-ICP` folder by exporting your current named target accounts from SalesLoft.

GTM Agent Team Roster & Roles

The Sapia GTM team comprises **8 specialized agents** operating in a coordinated workflow. Here is a summary of each agent's role and primary contribution:

1. **■ Sales Director (SAPIA-SD):** The orchestrator. Coordinates the weekly send schedule, runs the Monday signal harvests, audits Copywriter drafts against the **8-Point Copywriting Checklist**, posts the Slack Morning Digest for approval, and benchmarks Friday performance against real-world metrics.
2. **■ Research Analyst (SAPIA-RA):** The scout. Pulls HubSpot newsletter clicks, monitors job transitions, runs Brave Search lookalike scans to discover net-new companies, and flags triggers.
3. **■ ICP Scorer (SAPIA-ICP):** The qualifier. Automatically scores and tiers prospect accounts (Tier A/B/C) based on your custom 6-dimension rubric to filter out poor-fit leads.
4. **■ Company Researcher (SAPIA-CR):** The profiler. Gathers deep target intel from open-web sources to build 1-page briefs mapping ATS/HRIS technologies, 4-layer pain points, and competitor positioning.
5. **👉 ■ Copywriter (SAPIA-CW):** The writer. Voice-matches to your reps' profiles and Gong call transcripts, drafting tailored email sequences (Touch 1-4) with high-reply PVP CTAs.
6. **■ Prospect Hunter (SAPIA-PH):** The loader. Enriches contacts with verified email and LinkedIn URLs using Lusha (strictly email-only to protect credit limits), checks 90-day cooldowns, and stages records.

7. ■ Reply Handler (SAPIA-RH): The closer. Monitors replies natively via SalesLoft, triages intent into 12 buckets, scores BANT criteria, and pushes AE Slack briefs for warm handoffs.

8. ■ GTM Action Thinker (SAPIA-GAT): The strategist. Challenges, brainstorms, and deconstructs campaign ideas or angles, identifying blind spots and setting metrics-backed roadmaps.

Tuesday & Thursday Cadence Schedule

To successfully run outbound cadences twice a week on Tuesdays and Thursdays, the team follows a structured operational rhythm. Below is the weekly timeline and the specific activities required:

[MON: Plan & Score] → [TUE: Outreach 1 (Slack Gate)] → [WED: Deep Research] → [THU: Outreach 2 (Slack Gate)] → [FRI: Review & Plan]

Monday: Sourcing & Planning (Prep for the Week)

- **Goal:** Set the week's accounts and verify targets.
- **Activities:**
 - Sales Director harvests new signals (newsletter opens, job changes).
 - Research Analyst processes lookalikes and updates the signals logs.
 - ICP Scorer qualifies all target accounts, keeping only Tier A & B targets.
 - Sales Director builds the **Weekly Outreach Plan** allocating targets to Tuesday and Thursday batches (cap: 100 unique companies per send day).

Tuesday: Outreach Day 1 (Send Session 1)

- **Goal:** Approve and send the first email batch.
- **Activities:**
 - **7:30 AM:** Copywriter drafts the Tuesday batch emails (run in 4 sessions of 25 emails to avoid token overload).
 - **8:00 AM:** Sales Director audits drafts and posts the **Morning Digest** (up to 100 emails) to Slack.
 - **9:00 AM:** Human rep reviews digest in Slack, replying APPROVE or EDIT directly in the thread.
 - **9:30 AM:** Prospect Hunter runs Lusha email-only lookup, de-dupes, and stages approved contacts in SalesLoft.
 - **10:00 AM:** Sales Director triggers the SalesLoft send sequence.

Wednesday: Deep Profiling (Prep for Thursday)

- **Goal:** Build rich briefings for the second send day.
- **Activities:**
 - Company Researcher builds deep 1-page briefs for the Thursday targets (mapping 4-layer pain points, ATS tech stack, and competitor positioning).
 - Rep reviews target list for Thursday and updates the vault's objection or case studies folders if needed.

Thursday: Outreach Day 2 (Send Session 2)

- **Goal:** Approve and send the second email batch.

- **Activities:**

- **7:30 AM:** Copywriter drafts the Thursday batch emails (processed in subsets of 25).
- **8:00 AM:** Sales Director audits drafts and posts the **Morning Digest** (up to 100 emails) to Slack.
- **9:00 AM:** Human rep reviews and replies APPROVE or EDIT in the Slack thread.
- **9:30 AM:** Prospect Hunter enriches via Lusha and stages approved contacts in SalesLoft.
- **10:00 AM:** Sales Director triggers the SalesLoft send.

Friday: Audit, Learn & Rubric Calibration

- **Goal:** Collect performance metrics and feed learnings back to the agents.

- **Activities:**

- Sales Director pulls SalesLoft stats (Sends, Opens, Replies, Bookings) and runs the **Outbound Analyst Benchmark check**.
- Sales Director posts the Diagnostic Verdict to #sapia-performance mapping root-cause fixes.
- Copywriter updates Campaign_Learnings.md with best-performing hooks.
- ICP Scorer calibrates scoring thresholds based on response signals.

Setup Sequence (Phased)

Week 1–2: Foundation

1. Fill in knowledge vault (priority files above)
2. Configure MCP servers (start: SalesLoft, Lusha, HubSpot, Slack)
3. Create SAPIA-SD and SAPIA-RA Projects in Claude Desktop
4. Run first Research Analyst session manually — validate output quality
5. Run first ICP Scorer session — calibrate rubric against known customers

Week 3–4: First Live Run

6. Create all remaining Projects (CW, PH, RH)
7. Share all Projects with your 2 peers
8. Each rep completes their Voice Profile
9. Run first full batch: 5–10 emails through the full pipeline → human approval → SalesLoft send
10. Review every output. Iterate system prompts and vault docs.

Week 5–6: Activate Signal Workflows

11. Upload first LinkedIn Sales Nav CSV → activate Champion Mover workflow
12. Run first HubSpot newsletter engagement pull → activate Warm Engagement workflow
13. Connect Reply Handler → Slack alerts (monitors replies natively via SalesLoft MCP)
14. First full week on 2-day send cadence (Tue + Thu)

Week 7+: Optimise

15. Monthly: Review Campaign_Learnings.md; update prompts and vault

- 16. Monthly: Calibrate ICP Scoring Rubric based on conversion data
- 17. Begin A/B testing using the A_B_Test_Log.md
- 18. Consider adding Wednesday as a third send day if quality and reply rates warrant

Key Design Decisions Applied

Based on your answers, these are the specific configurations built in:

Decision	Implementation
SalesLoft Agentic ■	Native MCP in config; all sends via SalesLoft cadences only
No Salesforce	Removed from all agent prompts and config; SalesLoft is the de-dupe source
Gmail access ■	Excluded. SalesLoft handles all sending and reply tracking natively; Google OAuth setup skipped.
Gong access ■	Included for voice matched calibration only. Prompts filter calls strictly by sender's email to ensure differentiation.
Sales Nav: monthly CSV	Prospect Hunter has full CSV processing workflow; Lusha fills the gaps daily
HubSpot: fortnightly/monthly MCP query	Research Analyst briefed to query on this cadence; Newsletter Engagers Log ready
All outreach via SalesLoft	Copywriter routes all drafts to Sales Director → Morning Digest → SalesLoft only
3 reps, voice profiles TBD	Voice Profile Template created; each rep self-populates
Lead product: Chat Interview	Product_Overview.md structured around Chat Interview as primary
Secrets: TBC	Config template uses environment variable placeholders; advise IT to choose 1Password or macOS Keychain

Outbound Email Copywriting Standards

Every outbound email drafted by the Copywriter is audited against a strict, research-backed checklist to ensure it reads like a human-to-human note and maximizes reply rates:

1. The 8-Point Copywriting Checklist

- **Em Dashes (— or –) Ban:** Entirely banned. It makes copy read like a marketing brochure, not a personal email.
- **No Rhetorical Hooks:** Cliches like "Are you struggling with X?" are banned. Opens directly on verifiable triggers.

- **No Generic Flattery:** Empty compliments like "Love what you're building" or "Hope this finds you well" are removed.
- **No Pompous Jargon:** Absolute ban on: *leverage, synergies, cutting-edge, robust, seamless, empower, streamline, unlock, next-level, paradigm, holistic, best-in-class, world-class.*
- **No "I" or "We" Openers:** The email body must start with the prospect's context (e.g. Given the Q4 hiring spike at [Company]...).
- **No Meeting Ask in Email 1:** Meeting requests are replaced with soft value CTAs.
- **Strict Word Limits:** Email 1 is capped at 120 words; follow-up touches are capped at 150 words.
- **Sentence-Case Subject Lines:** Capped at 6 words, lowercase, creating curiosity rather than pitching (e.g. frontline turnover at [Company]).

2. Permissionless Value Promise (PVP) CTAs

Generic "book a call" CTA requests are replaced with high-response **Permissionless Value Promises** (Insight, Benchmark, Playbook, or Diagnostic Questions) that offer standalone value in exchange for a simple "yes" reply:

- *Insight CTA:* "Put together a quick one-pager showing how other retail TA teams automate first-round screening. Worth a send?"
- *Benchmark CTA:* "Retailers like [Competitor] sit at a 12% candidate assessment drop-off rate. Curious how you compare — happy to share the benchmark data?"
- *Diagnostic Question:* "Are you currently using manual resume screening or automated tests first? Reason I ask is that's where candidates usually drop off."

MCP Integration Directory

The agent system utilizes 7 Model Context Protocol (MCP) integrations to interface with your live GTM systems. The table below maps each integration to the specific agents that use it, their purpose, and when they run.

MCP Server	Agent (Project Name)	Purpose	Operational Timing (When it runs)
SalesLoft	Sales Director (SAPIA-SD) Prospect Hunter (SAPIA-PH) Reply Handler (SAPIA-RH)	Checks weekly send volumes, validates existing leads/accounts for de-duplication, stages qualified contacts, checks cadence history, and monitors prospect replies natively (no Gmail access needed).	Monday: De-dupe check new prospects. Tue/Thu: Pre-send volume check + Reply monitoring. Friday: Performance reporting.
HubSpot	Research Analyst (SAPIA-RA)	Queries newsletter click/open analytics to capture warm intent signals from prospects in your specific regional territory.	Fortnightly / Monthly: Pulls newsletter engager lists to feed the outreach pipeline.
Lusha	Research Analyst (SAPIA-RA) Prospect Hunter (SAPIA-PH) Company Researcher (SAPIA-CR)	Lookalike company searches, company size validation, and email-only contact lookup (phone lookups are disabled to save credits).	Monday: Lookalike scans. Tue/Thu: Email-only contact enrichment.
Gong	Copywriter (SAPIA-CW)	Queries call transcripts strictly filtered by the sender's email address to extract your spoken vocabulary, value messaging, and customer objections.	On Demand: Calibrates voice profiles and drafts outbound messaging matches.
Slack	Sales Director (SAPIA-SD) Reply Handler (SAPIA-RH)	Posts regional Morning Digests, weekly plans, Lusha credit alerts, and pushes instant positive reply / meeting AE briefs to reps.	Tue/Thu (8 AM): Pushes digest drafts. Real-time: Pushes meeting/reply notifications (within 5 min).
Brave Search	Research Analyst (SAPIA-RA) Company Researcher (SAPIA-CR)	Web searches for target account news, executive interviews, hiring trends, and ATS keywords (e.g., successfactors logins) in public job postings.	Monday: Lookalike signal checks. Tue/Thu: Generates deep 1-page company research briefs.
Filesystem	All Agents	Reads global ICP profiles, rubrics, persona templates, objection libraries, and brand tone rules. Writes signal logs, briefs, drafts, performance updates, and the outreach history cooldown logs.	Continuously: Interfaced during every active step of the pipeline.

Sharing with Your Peers

The entire Claude Sale Agent folder can be shared via your existing shared drive. The README.md is a complete standalone onboarding guide for new team members.

What each peer needs to do independently:

- Set up their own Claude Desktop MCP config (credentials are personal)
- Fill in their own Voice Profile

What they get from the shared folder:

- All 7 agent system prompts (ready to paste)
- The full Knowledge Vault
- The README setup guide

Best Practice Guide: Ongoing Operations

This guide provides operational workflows, copy-paste prompts, and connection steps to run the agent team smoothly.

1. Starting & Resuming Work Sessions

AI agents work best when given clear, contextual triggers to start their run. Copy and paste these exact prompts in your Claude Projects.

A. Starting the Weekly Cycle (Sales Director - Monday)

Paste into SAPIA-[REGION]-SD Project:

"Let's kick off our Monday planning session for the [APAC / MENA / UK] region. Sourcing from our signals logs (Newsletter Engagers, Job Movers, Trigger Events), please identify up to 100 unique companies to target this week. Do not exceed 100. Run Lusha lookalike scans via Lusha MCP if we need a pipeline buffer. Once target accounts are identified, generate the Weekly Outreach Plan."

B. Triggering Copywriter Calibration (Copywriter - Tuesday/Thursday)

Paste into SAPIA-[REGION]-CW Project:

"We are starting the email drafting session for rep [Your Name]. First, read [Your Name]_Voice.md in 04-Brand_Voice/Sender_Voice_Profiles/ and the winning email examples in 03-Outreach/Email_Winners/ to calibrate. Stop and output your Voice Calibration summary for my approval. Do not draft any emails until I approve this calibration."

C. Continuing After Calibration Approval

Paste into SAPIA-[REGION]-CW Project once calibration is approved:

"Calibration approved. Read the target account list for today's batch from our Sales Director's Weekly Outreach Plan. For each account, read the corresponding Company Brief generated by the Company Researcher. Draft the Touch [1/2/3/4] email in accordance with our word count and banned phrase rules. Output the table with the 'Reasoning for angle' column."

D. Resuming a Stuck Session

Paste into any agent Project if a connection fails, a token limit is hit, or the session restarts:

"We are resuming our session. Read the latest file status in Sapia-Sales-Vault/ via Filesystem MCP to determine where we left off. Output a brief status summary of completed tasks and tell me what the next step is before running any MCP tools."

2. Setting Up Slack Notifications & Approvals

Reps do not need to check Claude Desktop constantly. The Sales Director and Reply Handler can push digests and alerts directly to your personal Slack DM or a dedicated regional channel, and read your response to continue.

Step 1: Authorize Slack in Claude Desktop

1. Open **Claude Desktop** and click the settings cog (or menu) in the bottom-left.
2. Select **Customize** (or Connectors).
3. Find **Slack** and click **Connect / Authorize**.
4. Log into your company's Slack workspace and approve permissions.

Step 2: Retrieve your Channel or User ID

- **For a channel:** Open Slack, right-click the channel name (e.g. #sapia-digest-apac), select **View channel details**, and copy the **Channel ID** at the bottom (starts with C, e.g., C1234567890).
- **For personal DMs:** Click your own profile picture in Slack, select **Profile**, click the three dots (...), select **Copy member ID** (starts with U, e.g., U1234567890).

Step 3: Map the ID in the Sales Director Prompt

Open your regional Sales Director prompt file (e.g. agent_prompts/00_sales_director.md) and edit the slack_notifications line under the Territory Configuration block:

```
- Slack notifications: post to [Insert Channel ID here, e.g. C1234567890] and DM to [Insert Member ID here, e.g. U1234567890]
```

Step 4: The Slack-First Approval Loop

Once you kick off a session in Claude Desktop:

1. The Sales Director posts the **Morning Digest** (the 100 drafted emails) to your Slack channel.
2. Review the drafts on your phone or Slack client.
3. **Approve directly in Slack:**
 - Reply **APPROVE** to send the whole batch.
 - Reply **HOLD** to pause.
 - Reply 3 **EDIT**: Change Woolworths hook to focus on retail growth to revise individual emails.

4. Back in Claude Desktop, simply type:

> "Check Slack approvals and run."

The agent will read the Slack channel history using the Slack MCP, see your approval or edits, update the drafts, and instruct the Prospect Hunter to stage them in SalesLoft.

3. Active Guardrails & Cost Protections

The agent system is equipped with multiple automated checks to protect your sender reputation, manage Lusha credit costs, and prevent Claude context limits from causing runaway token billing.

Guardrail Name	Target Agent	Rule / Action	Reason
Human-in-the-Loop Gate	Sales Director	No email auto-sends. Rep must explicitly reply APPROVE via Slack to unlock cadence enrollment.	Reputation & quality control
90-Day Outreach Cooldown	Prospect Hunter	Skip any contact emailed in the last 90 days (checks SalesLoft and Outreach_History_Log.csv).	Anti-spam and frequency protection
Unique Company Limit	Sales Director	Outreach batches restricted to 1 contact per company per batch (strictly different companies).	Prevents spamming multiple people at one organization at the same time
Weekly Batch Cap	Sales Director	Capped at 100 contacts per rep per send day. Excess are rolled over to the next send session.	Manageable inbox load & deliverability safety
Score-Before-Enrich	Prospect Hunter	Never look up a contact via Lusha unless company is qualified as Tier A or B by the ICP Scorer.	Credit cost conservation
Email-Only Lusha Lookups	Prospect Hunter	Strictly configure Lusha query to fetch email addresses only . Scrapes of phone numbers are forbidden.	Phone scraping costs 6x extra credits (7 vs 1 credit)
Lusha Weekly Budget Alert	Sales Director	Alert rep in Slack if projected weekly spend exceeds 200 credits per rep (600 total).	Keeps Lusha billing predictable
Token Session Limits	All Agents	Discovery capped at 50 accounts; briefs at 10 companies; copywriter drafts at 25 emails per session.	Avoids context/token overflow
Opt-Out Safety Trigger	Reply Handler	Immediately remove contact from SalesLoft with zero delay if reply is classified UNSUBSCRIBE or NEGATIVE.	Legal compliance & domain reputation
Copywriter Calibration Gate	Copywriter	Must output calibrated voice profile for human approval before drafting any emails.	Guarantees authentic sender voice alignment

4. Daily Hygiene Checklist

- **Check Slack first:** Look at #sapia-alerts and #sapia-digest-[region] at 9:00 AM local time on Tuesdays and Thursdays.
- **Keep cadences clean:** If a contact replies positively, double-check that the Reply Handler successfully paused their SalesLoft cadence.
- **Empty the spam traps:** Review bounces or opt-outs flagged by the Reply Handler once a week to ensure your domain health remains high.
- **Log the wins:** When an email books a meeting, copy the body text and paste it into Sapia-Sales-Vault/03-Outreach/Email_Winners/Cold_Winners.md so the Copywriter continually learns from what succeeds.
- **Clear cache weekly:** If Claude Desktop runs slowly, close the app and restart to clear the filesystem and MCP connection logs.
- **Lusha Budget Lock:** Respect the 200-credit weekly cap. If the Prospect Hunter triggers a warning alert, verify the target list quality before authorizing the override.
